Ex. 13 Implement your own Ping program

Aim:

To implement a simple Ping program to check the connectivity btw two network devices.

Theory:

Ping as a network utility used to check whether a destination device is recorded through a network.

It sends a request to the destination and waits for a reply If reply is received, connection is successfully.

Requirements:

* Computer.
* python / suitable programming environment
* Network connection.

Procedure:

1) Create a new program for implementation Ping operation.

2) Import the receiving socket network.

3) Get IP address or hostname of the destination.

4) Create a socket for communication.
5) Send Req packet to the destination.
6) Reach the process for required and packets.

Algorithm:

1) start.
2) enter destination IP address
3) Create a socket
4) send a ping request
5) wait for responce
6) if response is resumed
7) otherwise deploy
8) stop

Result:

Thus, the Ping program was successfully implemented.
