Ex 14 Raw sockets - packet sniffing

Aim:

To write a program using RAW sockets to implement packet sniffer

Theory:

A packet sniffer is a program used to capture and examine network packet travelling through a network interface.

Requirement:

* Computer/laptop
* Python
* Raw socket support

Algorithm:

1) start the program
2) Create RAW socket.
3) find the socket to required equipments.
4) wait for Incoming network packets
5) Stop program when required.

Procedure:

1) Open python IDE or terminal
2) Create a python programs for packet sniffing
3) Import socket module
4) Create RAW socket
5) Use recv from(), fun to receive packets
6) Read captured packed data
7) Generate sim network traffing

Result:

Thus, RAW socket based packet sniffing program was implemented successfully
