PACKET CAPTURE TOOL - WIRESHARK

AIM:-

* To capture, filter and analyze network packets using the wireshark packet capture tools.

main components of wireshark:-

1) Packet List Pane - Display all captured Packet
2) Packet Details Pane - Display detailed Protocal
3) Packet Byte Pane - Display the raw Packet data in hexa decimal format.

Common wireshark filters.

Protocal	TCP	UDP	ARP	DNS	HTTP
filters	tcp	udp	arp	dns	http

PROCEDURE

* Open wireshark and select the active network interface.
* Start capturing packets and capture about 100 packets
* Stop the capture and start the packets
* Apply the required filters.
  - tcp / udp
  - arp
  - dns
  - ip / icmp packets

* Select the filtered Packets and inspect the packet details.
* For TCP/UDP and DNS, open Statistics-flow graph to view the communication flow.
* Save the captured packets and save it.

CAPTURE PACKETS:

DETAILED INFORMATION OF PACKETS

Flow Graph:

RESULT:

* Thus, the network packets were successfully captured, filtered, inspected and analyzed using wireshark, and the communication flow of different protocols was studied.
