NMAP HOST DISCOVERY IN TRYHACKME

AIM:-

* To use Nmap to discover live hosts using ARP, ICMP, TCP and UDP host discovery techniques in the TryHackMe.

REQUIREMENTS:

* Try HackMe account, Attackbox, Target Machine.

PROCEDURE:

* Login to the TryHackMe Platform.
* Start the required target machine and note its IP address

1) ARP Scan:-

* Address Resolution Protocal Scan is mainly used to discover hosts on the local network / subnet.

sudo nmap -PR -sn 10.200.6.0/24.

2) ICMP Echo Scan:-

* This scan uses the traditional ICMP Echo request, similar to the Ping command

sudo nmap -PE _sn 10.200.6.0/24

3) ICMP address mask scan :-

* Nmap can also use ICMP address-mask requests for host discovery.

4) TCP Syn Ping Scan.

TCP Syn Packets are sent to specified ports. A response such as SYN/ACK RST indicates that the host is active

```
sudo nmap -Ps 22,80,443 -sn
10.200.6.0/30
```

5) UDP Ping Scan :-

```
sudo nmap -PU53,161,162 -sn 10.200.6.0/30
```

Result :-

*The nmap host discovery was successfu performed using ARP, ICMP, echo, ICMP Time
