Ex :9

Develop a customized Ping commands to Test server connectivity.

Aim:

* To develop a customized Ping command using Python to test server connectivity and measure the response time of a remote host.

Requirements:

* Python, socket, struct, os, time
* Root / Administrator Privileges.

Procedure:

* Open the terminal n Cmd with administrator root privileges.
* Import the required Python modules
* Create a function to calculate ICMP Checksum.
* Build the ICMP echo request Packet using struct.Pack()
* Create a raw Packet using IP PROTO ICMP
* Send the packet to the target.

Result:

Thus a customised ping command was successfully developed using python to test server connectivity and calculate RTT.
